

XM Instant Traffic and Weather provides services that would otherwise be unavailable to me. I travel alot by car and plane. I can always take my XM Radio with me and I have a printed schedule of the channels to turn to for traffic and weather. For example, I fly from Florida to Boston, get in the rental car, set up my Roady and hear about traffic accidents and delays as I try to negotiate my way to a meeting. I don't know the local radio channels. There is no printed guide for me to utilize and I hate fiddling with the radio in an unfamiliar car as I hit big city traffic. When I surf the am and fm channels I usually only hear ad after ad and maybe a quick traffic report if I'm lucky. I also us XMRadio instant traffic and weather service as I'm packing for a trip. I use the information I hear to decide what to pack -- umbrella? Heavy coat? Otherwise I would not have instant access to this information unless I have time to sit at the computer and surf for city specific weather. Allow XMRadio Instant Traffic & Weather to continue, please!!!!!!!!!!!!
